How to Think in the AI Era: Crash Course

Foundations (Everyone), Chapter 7/10 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/how-to-think-ai-era

EN: AI gravity pulls you toward skipping thinking. This course gives 6 thinking disciplines to resist it, so a 'deliverable' stays documented evidence of thinking, not just AI output you approved.
Roman Urdu: AI gravity aapko sochna skip karne ki taraf khenchti hai. Yeh course 6 thinking disciplines deta hai is ke khilaf, taake 'deliverable' sochne ka documented evidence rahe, sirf approved AI output na ho.

1. Prediction Lock + Reasoning Receipt

- **Discipline 1 -- Prediction Lock:** 4 lines (real decision, settling fact, position, confidence+flip) -- only lines 1-2 go into the AI prompt, so you commit before seeing the answer.
- **Discipline 2 -- Reasoning Receipt:** 3-column rows with 5 labels (ACCEPT/REJECT/MODIFY/SURFACED/MISSED) -- an all-ACCEPT receipt is a warning sign.

2. Error Taxonomy + Thinking in Systems

- **Discipline 3 -- Error Taxonomy:** 6 named error types -- factual, logical gap, false confidence, missing context, fabricated source, stale fact.
- **Discipline 4 -- Thinking in Systems:** build a Cascade Map (5 steps, 5 groups, 3 layers) to find the loop, not just the first-order effect.

3. First Principles + Working WITH AI

- **Discipline 5 -- First Principles:** a named threshold beats a vague complaint.
- **Discipline 6 -- Working WITH AI:** compare 3 paths (Solo / AI-only / Collaborative) -- collaborative tends to lift weaker performers most and compress skill toward the middle.

4. Capstone

- A $10,000 student-council decision run through all 6 disciplines, with a decision-importance table for when to use how many.

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
AI gravity	The pull toward skipping thinking and accepting AI output as-is.	Sochne ko skip karne aur AI output seedha accept karne ki taraf khinchaw.
Prediction Lock	Committing to a position + confidence BEFORE seeing the AI's answer.	AI ka jawab dekhne SE PEHLE position+confidence commit karna.
Reasoning Receipt	A row-by-row record of what you accepted, rejected, or modified from AI output.	AI output se jo accept/reject/modify kiya, uska row-by-row record.
Error Taxonomy	6 named error types: factual, logical gap, false confidence, missing context, fabricated source, stale fact.	6 named error types: factual, logical gap, false confidence, missing context, fabricated source, stale fact.
Cascade Map	A systems-thinking diagram finding the feedback loop, not just the first effect.	Systems-thinking diagram jo feedback loop dhoondta, sirf first effect nahi.

Quick Self-Check

Question	Answer
Why write lines 1-2 of the Prediction Lock before prompting the AI?	To commit your own position before seeing the AI's answer, so you can't retroactively claim you 'already knew'.
What does an all-ACCEPT Reasoning Receipt usually signal?	A warning sign that no real critical thinking happened -- everything was rubber-stamped.
What are the 6 named error types in the Error Taxonomy?	Factual, logical gap, false confidence, missing context, fabricated source, stale fact.
What does research on AI collaboration find about skill levels?	AI tends to lift the least-skilled performers the most, compressing results toward the middle (centaur-chess-style research).

Where This Leads / Sources

Leads to: 4 practice projects (premortem, audit-the-confident-answer, question-that-unlocked-it, decision-dossier capstone). Full 31-Q quiz in 09-test-your-understanding.md.
