The Agent Factory Ecosystem

The Ecosystem, Chapter 1/9 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/ecosystem-overview

EN: One Source of Truth. Everything else is a product built on top of it. Four products share one System of Record over MCP: the SoR itself, Zia Tutor AI, Zia Developer AI, and the FDE AF Model blueprint -- update the book and all four stay in sync.
Roman Urdu: Ek Source of Truth. Baaqi sab usi par khare products hain. Char products ek System of Record MCP se share karte hain: SoR khud, Zia Tutor AI, Zia Developer AI, FDE AF Model blueprint -- book update ho to chaaron auto-sync.

1. Four Products, One System of Record

- **Agent Factory SoR** (Beta 1) -- book's content served over MCP, any agent can ground against it.
- **Zia Tutor AI** (Beta 1) -- Zia Khan's digital twin, teaching lane, inside Claude.
- **Zia Developer AI** (in development) -- construction lane, inside a coding agent.
- **FDE AF Model** (published) -- the 5-layer blueprint arranging all of this into one platform+business model.

2. One Source, Three Gateways

- **Layer 1 -- 3 audiences, 3 doors:** Learners (free Claude+connector), Builders (coding agent plugin), Authors (derivative-book agents).
- **Layer 2 -- thin gateways** just route audience to functionality below. **Layer 3 -- component MCP packages** (content, learning, pedagogy, builder). **Layer 4 -- one source of truth**: Git repo (canonical MDX) + one Postgres (relational+vector+full-text).
- A new product = just a new thin gateway on the same stack -- the source never changes. Economics: user brings their own model, so cost stays near-zero at scale.

3. The Seat the Whole Ecosystem Protects: Outcome Architect

- As AI workforce grows, it depends more on a human who precisely says WHAT to build. Execution value keeps falling (agent tools get cheap); the thing that doesn't fall is knowing exactly what to build, in what order, and when 'done' means done.

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
Agent Factory System of Record	The book's content served over MCP for any agent to ground against.	Book ka content MCP se serve, kisi bhi agent ke ground hone ke liye.
Zia Tutor AI	A digital twin teaching lane inside Claude.	Teaching lane, Claude ke andar digital twin.
Zia Developer AI	A construction lane inside a coding agent.	Construction lane, coding agent ke andar.
FDE AF Model	The 5-layer blueprint arranging the whole platform+business model.	5-layer blueprint jo poora platform+business model arrange karta hai.
Outcome Architect	The human who owns precisely what gets built.	Insaan jo precisely decide karta hai kya banana hai.

Quick Self-Check

Question	Answer
What's the one-line thesis of this chapter?	One Source of Truth -- all other products are built on top of it and stay in sync automatically.
Why does a new product never touch the source?	Each new product is just a thin gateway on the same 4-layer stack -- source of truth stays at Layer 4.
Why does execution value keep falling while the Outcome Architect seat gets more important?	Agent tools get cheaper/more capable, but deciding exactly what to build and when it's done is still scarce.
