About: What Is This Thing I'm Holding?

Front Matter, Chapter 1/12 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/about

EN: This book is a canonical source for the method used to build Digital FTEs (role-based AI employees) and assemble them into AI-Native Companies. When AI gets cheap, the scarce thing left is the method -- and the 4 human skills AI cannot absorb.
Roman Urdu: Yeh book Digital FTEs (role-based AI employees) banane ka canonical source hai, jinse AI-Native Companies banti hain. Jab AI sasti ho jaye, scarce cheez method reh jati hai -- aur woh 4 human skills jo AI absorb nahi kar sakta.

1. Four Skills to Survive the Agent Era

- Asal sawal 'AI se zyada smart kaise banu' nahi hai (not winnable) -- balke: jab intelligence sasti ho jaye, insaan ke paas kya reh jata hai jo koi cheen nahi sakta?
- **4 scarce skills:** (1) Direction Set Karna (pehla 10%) -- niyat ko AI-executable spec mein badalna. (2) AI Orchestrate Karna (beech ka 80%) -- jobs delegate karna, sabse zyada demand wali skill. (3) Sach Judge Karna (aakhri 10%) -- output validate/verify karna. (4) Logon Se Connect Hona -- genuine human connection, simulate nahi ho sakti, loop se bahar.
- Pehli 3 skills = **10-80-10 Rule**, poori book mein repeat hoga. Combined = ek **human-agent team**: insaan edges par direction/judgment dete hain, agents beech mein execution.

2. What This Is -- Core Vocabulary

- **AI Worker / Digital FTE** (FTE = full-time equivalent), **General agent** (Claude Code/Cowork/ChatGPT jaisa all-purpose assistant), **AI-Native Company** (founder + few humans + many AI Workers) -- 3 core terms, interchangeable Digital FTE/Digital Worker/AI Worker.
- **Jensen Huang's Five-Layer Cake of AI:** 1) Energy, 2) Chips, 3) Infrastructure, 4) Models, 5) Applications -- book 5th layer (Applications) ke baare mein hai.
- **Digital FTE = 4 cheezon ka combo:** Structured Specifications, Domain Expertise, Engineering Architecture, Human Oversight. Missing cheez excitement nahi hai, **method** hai (spec-driven + human-supervised).

3. Find Your Path -- The Ladder

- **4 Rungs:** 1. Foundations (browser-only, sab ke liye) -> 2. Mode 1 (apna kaam tez karna, doer) -> 3. Mode 2 (AI Workers banana, builder) -> 4. Forward Deployed Engineer (FDE) -- poori workforce end-to-end.
- Poori ladder chadhna zaroori nahi -- Foundations + Mode 1 khud ek serious skill set hai.

4. Getting Paid + Who It's For

- Do parallel sachai: developers ko kaam nahi mil raha, aur companies AI se kaam nahi bana pa rahin (~95% custom pilots koi ROI nahi dikhate). Gap = **deployment gap**.
- **3 Routes:** The Job, The Open Market (freelance/retainers), Your Own Startup (domain expert ke sath).
- 5 audiences: AI Developers (Builders), Domain Experts (Knowledge Holders), Executives (Decision Makers), Product Managers (Translators), Department Leaders.

5. Delivery + The Agentic Enterprise

- 1 source (book), 4 channels: The Book, Zia Tutor AI, Zia Developer AI, Derivative Books. 3 Delivery Modes: Read, Tutor, Build -- yeh khud education ka 10-80-10.
- **3 AI tool eras:** model-as-product -> harness-as-product (Claude Code/OpenCode) -> discipline-as-product (methodology/SKILL.md library, is book ka lens).
- Agentic AI feature nahi, ek **workforce** hai. Solo founder + rented infra + AI agents example: telehealth business, $100M+ revenue pehle saal.

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
AI Worker / Digital FTE	An AI employee doing a defined job (FTE = full-time equivalent).	AI employee jo defined job karta hai.
General agent	An all-purpose assistant (Claude Code, Cowork, ChatGPT).	All-purpose assistant jaisa Claude Code/Cowork/ChatGPT.
AI-Native Company	A company of a founder, few humans, and many AI Workers.	Founder + kam insaan + bohot AI Workers wali company.
10-80-10 Rule	Humans own the first and last 10%; AI orchestrates the middle 80%.	Pehla/aakhri 10% insaan, beech ka 80% AI orchestrate karta hai.
Mode 1	Using a general agent to do your own work faster (doer).	Apna kaam tez karne ke liye AI use karna.
Mode 2	Building AI Workers that do work for others (builder).	AI Workers banana jo doosron ke liye kaam karein.
Forward Deployed Engineer (FDE)	Builds an org's whole AI workforce end-to-end, on-site.	Poori AI workforce end-to-end, on-site banata hai.
SKILL.md	Plain-text file packaging a skill an agent can load and follow.	Skill package karne wali plain-text file, jo agent load/follow kar sake.
Agent Factory	A spec-driven, human-supervised practice for manufacturing AI Workers.	AI Workers manufacture karne ki spec-driven, human-supervised practice.

Quick Self-Check

Question	Answer
What's the un-winnable race this book rejects?	Racing AI on raw speed/intelligence -- the real question is what stays scarce when intelligence is cheap.
What is the 10-80-10 Rule?	First 10% = set direction, middle 80% = orchestrate AI, last 10% = judge truth -- the 4th skill (human connection) runs outside this loop.
Difference between Mode 1 and Mode 2?	Mode 1 = use AI to do your own work faster (doer); Mode 2 = build AI Workers that do work for others (builder).
What are the 4 parts of a Digital FTE?	Structured Specifications, Domain Expertise, Engineering Architecture, Human Oversight.
Why does the book treat 'method' as the scarce resource?	When intelligence is cheap, the discipline (spec-driven, human-supervised) is what nobody else can copy instantly.
What are the book's 3 'getting paid' routes?	The Job, The Open Market (freelance/retainers), Your Own Startup (with a domain expert).
What's Jensen Huang's Five-Layer Cake, and which layer is this book about?	Energy, Chips, Infrastructure, Models, Applications -- the book is about Applications (layer 5).
