ChatGPT & Claude Quick Reference

References & Companions, Chapter 1/4 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/claude-chatgpt-101-crash-course

EN: Two cockpits, one discipline -- switch layout is product-specific, but the flying (the discipline from earlier courses) transfers. Same 7 things, different names: artifact/writing-block, connector/app.
Roman Urdu: Do cockpits, ek discipline -- switch layout product-specific hai, flying (pichle courses ki discipline) transferable hai. Wahi 7 cheezein, alag naam: artifact/writing-block, connector/app.

1. The Cockpit + Context

- Think in 3 levels, not names: fast/thinking/flagship. Claude = Haiku/Sonnet/Opus; ChatGPT = Instant->Pro.
- **3 staleness signs** (forgotten rule, contradiction, generic drift) -> ask for a state summary before continuing.

2. Making the Workspace Yours

- **Repetition test for Projects:** same background/file used 3x = time for a Project. Claude = retrieval-based (~10x capacity); ChatGPT = project-only memory (isolated).
- Memory/Instructions/Projects = stable rules / evolving context / scoped work. Incognito is memory-free, NOT trace-free (vendor retains ~30 days).
- Artifacts (Claude) vs writing/code blocks (ChatGPT, replaced canvas in 2026). For an actionable number, check which column is actually COMPUTED.

3. Extending Reach + Proving It

- Skills (method) vs Projects (knowledge) vs Plugins (bundle) vs Custom GPT (separate assistant). Agent Skills is an open standard -- portable across vendors.
- Connectors (Claude) / Apps (ChatGPT) -- MCP is 'USB-C for AI tools' (a plug standard, not automatic access).
- **5-step proof loop:** pick a task -> find an old example -> reproduce it -> compare -> refine. Passing earns confidence, it never transfers accountability.

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
3-level model thinking	Fast/thinking/flagship, not vendor names.	Fast/thinking/flagship, vendor names nahi.
Repetition test	Same background/file used 3x signals you need a Project.	Same background/file 3x use hona Project ki zaroorat batata.
Incognito != trace-free	Memory-free, but the vendor still retains data ~30 days.	Memory-free, lekin vendor data ~30 din retain karta.
Artifact vs writing/code block	Claude's persistent editable object vs ChatGPT's 2026 canvas replacement.	Claude ka persistent editable object vs ChatGPT ka 2026 canvas replacement.
5-step proof loop	Pick task -> old example -> reproduce -> compare -> refine.	Pick task -> old example -> reproduce -> compare -> refine.

Quick Self-Check

Question	Answer
Why does this chapter say the models should be thought of in 3 levels, not by name?	Vendor model names change often; the fast/thinking/flagship pattern transfers across both products and over time.
What's the repetition test for deciding you need a Project?	If the same background or file has been used 3 times, it's time to move it into a Project instead of re-pasting it.
Why is Incognito mode not the same as 'trace-free'?	It avoids building memory, but the vendor can still retain the underlying data for roughly 30 days.
What does the 5-step proof loop actually earn you?	Earned confidence in the tool for that task -- it never transfers accountability for the result.
