The Forward Deployed Engineer Agent Factory Model

The Ecosystem, Chapter 4/9 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/ecosystem-fde-af-model

EN: The ecosystem's blueprint: one platform (run by Panaversity) + one business model (graduates earn on top), five layers from foundation to customer. One line: build the base once, then let AI fit it to every profession and every customer.
Roman Urdu: Ecosystem ka blueprint: ek platform (Panaversity chalati) + business model (graduates kamate), paanch layers foundation se customer tak. Ek line: base ek baar banao, phir AI se har profession/customer ke liye fit karo.

1. Where This Came From

- Palantir proved it: one core platform + Forward Deployed Engineers embedded per customer ('gravel road to highway' -- shared improvements get added to the platform).
- 3 reasons verticals won't go obsolete to general-lab AI: verticals USE lab models (don't compete), general AI can't deploy itself inside a company (needs Layer-4 FDE work), and trust/rights-cleared knowledge takes time no one can instantly replace.

2. The Five Layers

- **Layer 0 -- Foundation:** machinery (Postgres/pgvector/MCP/Better Auth).
- **Layer 1 -- Content SoR Kernel:** makes any content a source of truth (owner, versions, review, access, citations).
- **Layer 2 -- Teaching & Development:** reusable learning/pedagogy/builder components -- stays generic, never modified per vertical.
- **Layer 3 -- Vertical Ecosystems:** the domain trio -- Domain SoR, Domain expert twin, Domain builder.
- **Layer 4 -- Customer Instances:** expert -> thin slice -> sponsor -> baseline -> contract of success -> engagement -> thicker SoR.

3. The One Law + Business Model

- **The One Law:** whatever repeats at one layer gets evaluated for promotion to the layer below -- never automatic, gated by 6 conditions (no confidential data, generalizable, fits platform strategy, passes security/compliance, has tests/evals, has a named owner).
- **3 customer-protecting commitments:** clean-room promotion, opt-in promotion, rewarded promotion.
- Earning climbs by layer: Layer 1 (build client SoRs), Layer 2 (manufacture Workers via Zia Developer AI), Layer 3 (own domain startup), Layer 4 (FDE engagements + retainer).

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
Forward Deployed Engineer (FDE)	An engineer embedded at a customer, fitting the platform to them.	Customer ke andar embedded engineer, platform ko fit karta hai.
Machinery / Kernel / Instance	Running infra -> reusable SoR component -> a specific deployed SoR.	Chalti infra -> reusable SoR component -> specific deployed SoR.
Domain trio	Domain SoR + Domain expert twin + Domain builder -- one per vertical.	Domain SoR + expert twin + builder -- har vertical ka apna.
The One Law	Whatever repeats at a layer gets evaluated to promote one layer down.	Jo cheez layer par repeat ho, usay neeche promote karne ke liye evaluate karo.
Contract of success	A written baseline, target, and acceptance criteria for an engagement.	Likhit baseline, target, acceptance criteria ek engagement ke liye.

Quick Self-Check

Question	Answer
What are the 5 layers, top to bottom?	Layer 0 Foundation, Layer 1 Content SoR Kernel, Layer 2 Teaching & Development, Layer 3 Vertical Ecosystems, Layer 4 Customer Instances.
Why can't general-lab AI make verticals obsolete?	It can't deploy itself inside a company (needs FDE-led Layer-4 work), and governed vertical knowledge lives outside the model.
What are the 6 conditions before 'The One Law' promotes something down a layer?	No confidential data, generalizable, fits platform strategy, passes security/compliance, has tests/evals, has a named owner.
What's the 'domain trio' at Layer 3?	Domain SoR (regulations/procedures), Domain expert twin (licensed voice/likeness), Domain builder (vertical-specific Zia Developer AI).

Where This Leads / Sources

Leads to: Agent Factory System of Record (Layer 1 live instance), Choosing Your Vertical, Designing the Vertical System of Record (Layer 3/4 method).
