From One-Off to Worker: The Handoff to Manufacturing

Mode 1: Problem-Solving, Chapter 3/3 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/from-one-off-to-worker

EN: Mode 1's last chapter, Mode 2's on-ramp: once you've solved a task by hand, repeatedly, in a proven way, how to promote it into a permanent worker -- never built from scratch. 'You don't build a worker from scratch. You promote a proven solution.'
Roman Urdu: Mode 1 ka aakhri chapter, Mode 2 ka on-ramp: task haath se, baar baar, proven tareeqe se solve karne ke baad, usay permanent worker mein promote kaise karo -- scratch se nahi. 'Worker scratch se nahi banate. Proven solution promote karte hain.'

1. The Signal: Is This Ready to Cross?

- Gate 2 (from the previous chapter) gives half the signal: often + same shape + worth it. The other half: 'have you solved this WELL already -- the same way, 3 times?'
- **Repetitions are research, not waste:** each time you solve it, you learn an edge case or better step order. Cross when learning slows, not before.

2. The Four Promotions

- Manufacturing = Harvest (gather the pieces from a good Mode 1 session: brief, output shape, check, saved result) + Harden (make each piece strong enough to work without you).
- **1. Brief -> Spec** (a written document the worker reads every run). **2. Your check -> Eval** (saved examples + known-good answers grade it automatically). **3. You-in-the-loop -> Exits** (decide in advance when/who/what-info to escalate to). **4. Session -> Runtime** (it must exist without you, needs a runtime that keeps it alive).

3. The Fork: Own It or Manufacture It

- **Own It (Personal Harness):** worker is just for you -- lighter path (OpenClaw/Hermes). **Manufacture It (Digital FTE):** worker is for an organization, others rely on it -- all 4 promotions done RIGOROUSLY (Mode 2 track).
- Deciding question: who is the worker for, and who relies on it? Ownership (yours vs org's) and Mode (once vs lasting) are 2 separate questions -- there's no 3rd mode.

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
Task vs Asset	Solving by hand repeatedly (task, cost repeats) vs building a worker once (asset, cost once, payoff repeats).	Haath se baar baar solve karna (task, cost repeat) vs ek dafa worker banana (asset, cost ek dafa, payoff repeat).
4 Promotions	Brief->Spec, Your check->Eval, You-in-the-loop->Exits, Session->Runtime.	Brief->Spec, Your check->Eval, You-in-the-loop->Exits, Session->Runtime.
Harvest + Harden	Gather the pieces of a proven solution, then make each strong enough to run without you.	Proven solution ke pieces uthao, phir har piece ko bina aap ke chalne jitna mazboot karo.
Own It vs Manufacture It	Personal harness (just for you) vs Digital FTE (organization relies on it).	Personal harness (sirf aap ke liye) vs Digital FTE (organization rely karti).

Quick Self-Check

Question	Answer
What's the rule-in-one-line of this chapter?	'You don't build a worker from scratch. You promote a proven solution.'
What's the real test for whether a task is ready to be promoted to a worker?	Have you solved it well, the same way, 3 times already -- not just whether it's frequent and similar in shape.
What are the 4 Promotions, from Mode 1 artifact to worker component?	Brief->Spec, your check->Eval, you-in-the-loop->Exits, session->Runtime.
What's the deciding question at 'The Fork' (Own It vs Manufacture It)?	Who is the worker for, and who relies on it? -- not which mode it runs in.
