Build Your Identic AI Chief of Staff

Mode 2 Phase 3 (Scale the Workforce), Chapter 5/9 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/identic-ai-crash-course

EN: Build Claudia: a personal AI delegate that thinks like you, then governs your company's approval queue under a signed, bounded mandate -- so you don't become the bottleneck as the workforce grows.
Roman Urdu: Claudia banao: personal AI delegate jo aapki tarah sochti hai, phir aapki company ki approval queue signed, bounded mandate ke andar govern karti hai -- taake workforce bare to aap bottleneck na bano.

1. Two Agents That Never Overlap + Identic AI

- Coding agent only BUILDs (verify, place, enable heartbeat, leave); Claudia GOVERNS forever, alone, on her own heartbeat.
- **Identic AI's 5 marks** (Tapscott): personal, values-reflecting, extension-like, remembers over time, and SELF-SOVEREIGN (owned/controlled, never vendor-rented -- the most important, most quietly surrendered).
- Claudia decides via 3 layers: standing instructions (most reliable), per-decision feedback, derived patterns (useful but least certain).

2. Signed Bounded Mandate

- Claudia gets a SIGNATURE (only she can make) and a SPENDING LIMIT (narrow, deliberately conservative) -- her limit is always narrower than your authority, never wider.
- ed25519 private key (hers, secret) + public key (company). **3 checks before every post:** registration valid/not-revoked, signature verifies, action is within envelope.
- Counterintuitive: the credential she uses is a scoped-down BOARD credential -- she's not the company's own registered agent, who could approve nothing by itself.

3. A Week of Approvals + Override as Signal

- Payoff scenario: a week of real work clears through Claudia -- most routine items clear silently, a handful surface with reasoning, you get a one-line weekly brief.
- Disagreement/override is a SIGNAL, not a malfunction -- it carries reasoning forward into future similar cases (a standing change, not a one-off fix).
- **3 warning signs:** constant override (~1/5+, tighten the envelope), stop reading the weekly summary (silent rubber-stamping), almost everything surfacing (too cautious, loosen thresholds).

4. Worst-Day Rehearsal

- 2 things must hold if the laptop is lost/stolen: (1) YOU can shut it down instantly with your own login (never Claudia's own signature); (2) nothing learned is lost (plain files, backed up, keys just get reissued).
- Discipline: delegate work, never delegate authority; keep an honest ledger.

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
Identic AI	A personal, self-sovereign AI delegate -- category coined by Don Tapscott.	Personal, self-sovereign AI delegate -- Don Tapscott ka coined category.
Self-sovereign	Owned/controlled by you, never rented from a vendor -- the easiest property to quietly lose.	Aap se owned/controlled, vendor se rented nahi -- sabse asani se chupke khona wali property.
Signed bounded mandate	A narrower-than-yours spending limit + a signature only the delegate can make.	Aap se narrower spending limit + signature jo sirf delegate bana sake.
Override as signal	A correction carries forward -- it's a standing change, not a one-off fix.	Correction aage carry hota -- standing change hai, one-off fix nahi.
Worst-day rehearsal	Confirms you can always kill the loop with your own login, and nothing is lost if the device dies.	Confirm karta ke aap apne login se loop kill kar sakte, device mar jaye to kuch na khoye.

Quick Self-Check

Question	Answer
Why must Claudia's spending limit always be narrower than the owner's authority?	A delegate's bounds must never exceed the authority that granted them -- it structurally prevents the delegate from outgrowing its mandate.
Why is the credential Claudia uses a scoped-down BOARD credential, not her own agent credential?	A company-registered agent credential couldn't approve anything by itself -- her authority is always borrowed and bounded from the board's.
Why is an override treated as a signal, not a malfunction?	It carries reasoning forward -- the correction becomes a standing change that applies to future similar cases, not just a one-time fix.
What must always be true if the owner's laptop is lost or stolen?	The owner can shut everything down with their OWN login (never Claudia's signature), and nothing learned is lost since it all lives in backed-up plain files.

Where This Leads / Sources

Leads to: Eval-Driven Development, OpenClaw with General Agents, Workforce with Paperclip/Dynamic Workforce. Full 6 scenarios in the chapter's numbered files.
