Made, Not Generated: Website Design Crash Course

General Agents, Chapter 5/12 — Revision & Viva-Prep Cheatsheet (English + Roman Urdu)
Source: agentfactory.panaversity.org/docs/website-design

EN: 'Taste is now a file' -- good design knowledge can be written into a file any AI can follow. A GENERATED website is what happens with no guidance; a MADE website is what happens when someone makes real choices.
Roman Urdu: 'Taste ab ek file hai' -- achi design ki knowledge ek file mein likhi ja sakti jise koi bhi AI follow kar sake. GENERATED website wo hai jab koi guide na kare; MADE website wo hai jab koi real choices banaye.

1. AI Slop + the 4-Piece Stack

- AI doesn't choose, it predicts -- on an open question it gives the most common (average) answer. Fix isn't 'prompt harder', it's structural: a taste file that blocks default patterns.
- **4-piece stack:** Model (writes code), Taste (blocks defaults), Media (real photos/video), Host (deployment) -- also the basis of a client invoice.

2. Taste as a Skill

- Hallmark skill picks page 'shape' before color (21 shapes, 20 named themes). 'Study, don't copy' -- the study command extracts ideas, not pixels.
- Brand extraction: ask specifically, not for everything -- preferred sites give direction, the client's brand gives rules.

3. The Build + Media Pipeline

- Write 5-8 'beats' before building -- one screen, one idea each. Last beat must DO something (a link, a form).
- **4 media lanes:** real photos (free), AI-made free, AI paid-cents, AI video paid-credits -- with 4 permission habits (read rules, keep records, no real people without consent, disclose AI-made).

4. Verification + Ship

- **3 checkers:** Screenshot (AI sees its own page), Audit (Hallmark's specific problem list), Automatic Rule (a small yes/no program you write yourself).
- Cross-model design review: a DIFFERENT company's AI reviews what one AI built -- same-family review shares blind spots.
- Lesson from a real ledger-mismatch bug: automated checks missed it, only a human adding up numbers caught it. 'Automate what you can; spend attention where you can't.'

Key Terms Cheatsheet

One line each — English + Roman Urdu.

Term	English	Roman Urdu
AI slop	The generic, most-common-answer look AI defaults to without a taste file.	Generic, most-common-answer look jo AI taste file ke bina default karta.
Taste file	A written design-judgment spec any AI can follow.	Likha hua design-judgment spec jo koi bhi AI follow kar sake.
4-piece stack	Model, Taste, Media, Host.	Model, Taste, Media, Host.
Beats	5-8 planned screens/ideas written before building a page.	5-8 planned screens/ideas jo build se pehle likhe jate.
Cross-model design review	A different AI company's model reviews what another built.	Doosri AI company ka model jo kisi aur ne banaya review karta.

Quick Self-Check

Question	Answer
Why does AI default to generic-looking websites without guidance?	It predicts the most common (average) answer to an open question -- a taste file is the structural fix, not 'prompting harder'.
What's the difference between 'study' and 'copy' in this course?	Study extracts ideas/direction from reference sites; copying would take their pixels -- only study is the right move.
Why is cross-model (different company) design review preferred over same-model review?	A model reviewing its own or a sibling model's work shares the same blind spots -- a different company's AI catches different ones.
What did automated checks miss in the Ayesha ledger example?	A PKR 217,950 vs 217,930 mismatch -- only a human manually adding up the numbers caught it.

Where This Leads / Sources

Leads to: no direct crash-course follow-up named; closes the General Agents group's product-design arc. Full 8-step worked example in 05-complete-worked-example.md.
